

AMPLEXOR

# Enterprise Machine Translation

GLOBAL CONTENT SOLUTIONS

In today's business world, global communication takes place in real time. Companies all over the world are turning to machine translation to optimize costs and turnaround times of their global content efforts.

## OUR APPROACH

# Technology and translation expertise – hand-in-hand

Amplexor approaches machine translation (MT) like everything else we do: with the customer's needs first. Whether you're looking for automation, faster delivery, improved quality, privacy protection, cost savings or a bit of everything – we make it possible.

### → End-to-end MT support

Our MT experts support customers from feasibility analysis and MT implementation to engine training and optimization. This includes MT engine selection, workflow architectures, translation memory integration, quality plan development, user adoption and fine-tuning.

### → Confidentiality and data privacy

Data security is one of our top priorities. Our robust MT technology ensures information is kept confidential and protected throughout each step of the MT workflow.

### → Professional post-editing expertise

Every year Amplexor processes millions of machine translated words. Our high-quality machine translation results grant us the ISO standard 18587:2017 certification (Machine Translation Post-Editing Services).

### → Cutting-edge translation technology

Amplexor collaborates closely with leading language technology research institutions such as the German Research Center for Artificial Intelligence (DFKI), one of the largest centers of excellence in artificial intelligence (AI) worldwide.

### → Applied content intelligence

By combining the use of translation memory, domain or customer-specific terminology and MT engine training, we ensure optimum results and the highest possible quality output.

Terminology management

Adaptive neural MT

Quality control automation

Applied content intelligence

## USE CASES

# Making the most of your translation budget

Not every document or each form of communication requires the same level of excellence.

We help our customers make the best use of their translation budget, finding the ideal technology mix and quality level to communicate effectively with their target audiences worldwide.

As a recognized pioneer in the industry, our experience in the development, operation and optimization of MT systems has a rich history spanning linguistic, statistical and neural MT. From MT consulting to professional post-editing, we work with you to design the right translation strategy for your content.

## Unattended MT

Automatic Machine Translation, without human intervention. A cost-effective solution when all you need is speed and to get the general message across.

## MT with light post-editing

Light retouches to the MT output, fixing critical typos, grammar and machine-induced errors. The right choice for internal or short-lived informative content.

## MT with full post-editing

High-quality professional translation, fully adjusted to your company's terminology, style and other requirements. MT is used to accelerate the process and increase efficiency, ensuring first-class results.
