

Introducing the OpenText™ AppWorks™ low-code platform

Build and deploy digital business applications
at digital speed

Digital transformation is pushing developers to deliver applications and software capabilities at an ever-faster pace. The OpenText AppWorks low-code platform enables developers to build functionally rich enterprise information management (EIM) applications with minimal code.

BENEFITS

Accelerate time to value

Quickly build prototypes or minimum viable products and adapt them based on what you learn

Get closer to the subject matter experts

Information-driven design means that business users can engage in process definition and prevent requirements from being "lost in translation"

Increase architectural consistency

Maintain conformance to established integration blueprints, so IT can effectively manage performance and control risk

Boost developer productivity

Work more effectively with business users by speaking a common language and supplementing low code with custom development where necessary

"Low-Code enables us to rapidly develop innovative products and features while simplifying deployment methods. As a result, we can get solutions to market faster and at much lower cost."

Kiran Thakrar
CEO and President
Solusoft INC

Bringing the benefits of low-code to more developers

The AppWorks low-code platform extends the same enabling technologies to developers tasked with building:

- + Information-centric digital business automation applications, such as service requests or incident management applications.
- + Single-purpose mobile apps.
- + Solutions to augment OpenText EIM products.
- + Both simple and highly complex enterprise applications.
- + The OpenText low-code approach meets the needs of novice, intermediate, and advanced developers.

The AppWorks low-code platform makes it easy for developers to create applications that are:

- Content-rich
- Natively mobile
- Consistent in look and feel, infrastructure, and communication methods
- Easily integrated with all relevant enterprise systems
- Maintained with content governance and compliance

OpenTex AppWorks

 **Create value at digital speed**

With the AppWorks low-code platform, developers can quickly build prototypes as well as fully functional enterprise applications, so business users achieve value faster. As they capture feedback from users, developers can quickly iterate on their applications so that everyone benefits from course correction and new innovation.

 **Connect with consistency**

The AppWorks low-code platform gives enterprise IT the control it needs over integrations, with conformance to an established blueprint. It uses web services integrations which, once developed, are accessible to app developers via drag-and-drop tools. Pre-built integrations exist across the OpenText product portfolio. The AppWorks low-code platform provides drag and drop access to a number of OpenText content services, including OpenText™ Content Server, OpenText™ Archive Center, OpenText™ Core, and CMIS 1.1 compliant repositories. Applications built with AppWorks can consume other content services via API access.

 **Use low-code as much as you want**

Solve users' business problems using a combination of the lowcode platform and custom code written programming language and tools of your choice. The AppWorks low-code platform is extensible via its RESTful API, and you can use as much or as little low-code as you need. For example, an OpenText customer used the low-code platform to define all of its business logic for a customer onboarding application that serves both customers and internal constituents. It has deployed an application for internal users built with low-code building blocks and wrote a completely customized user experience for customers that connects to the same underlying business logic.

 **Information-driven design**

With the AppWorks low-code platform, developers define business processes, policies, and workflows by starting with the information that needs action. They model workflows and tasks using a language that business users and subject matter experts can understand rather than around a rigid process. As a result, fewer requirements get "lost in translation."

 **Get started now**

Today, OpenText Technology Partners have access to the AppWorks low-code development platform through the OpenText Global Partner Program.
